

SlideRenu®

CRITICAL FALL HEIGHT

NSF International is taking steps to make recreational splash parks and water venues safer. Considered the premier pool and spa safety standard, NSF/ANSI/CAN 50 is required by most commercial swimming pool codes.

The update to NSF/ANSI/CAN 50 is intended to improve safety by addressing health effects, slip resistance, impact attenuation, imperviousness, cleanability and durability of flooring surfaces at splash pads and other types of recreational pool and water venues.

SlidePad® and EdgePad™ are the only aquatic landing pad that features a certified landing surface with respect to critical fall heights established by NSF/ANSI/CAN 50.

As shown in the chart below, our standard 2" thick SlidePad® and EdgePad™ provides critical fall protection from a height of 48", or 4 feet.
